

SLM wins “Global Cooperation Award”

for its contribution to DENSO’s global business development

May 31, 2010

Sumitomo Light Metal Industries, Ltd.

Sumitomo Light Metal Industries, Ltd. (Head office: Minato Ward, Tokyo; President: Shigenori Yamauchi) is proud to report that it has received an award from DENSO Corporation in recognition of the company’s contribution to DENSO’s global business development. Sumitomo Light Metal Industries (SLM) has been supporting DENSO in establishing new overseas businesses and co-operating in multi-regional operations.

An awards ceremony was held during the “2010 General Meeting of DENSO Suppliers” on May 17th in the event hall at the DENSO’s head office. The award also went to the co-winner, Sapa Heat Transfer (Shanghai) Ltd.

This is the second time for SLM to receive the award. The first award was given in 2007 for the company’s efforts in Czech Republic to supply multi-port extruded tubes for automotive heat exchangers.

SLM is DENSO’s major supplier of such materials as aluminum sheets and extrusions, which are used in condensers and evaporators for automotive air conditioners, and more recently, in heat exchangers for the inverter cooler of hybrid vehicles.

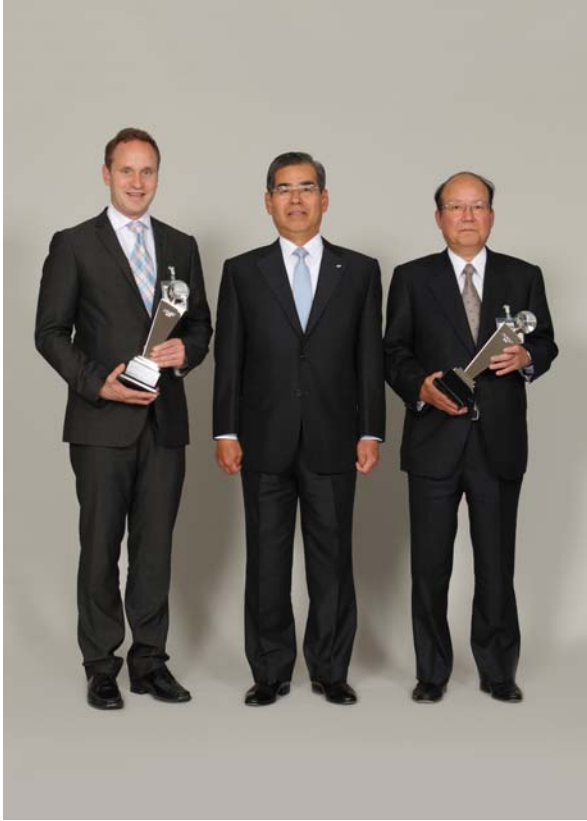

SLM Group has been pushing forward with global business development. The company takes pride in receiving the award as a high assessment of its endeavor.

From here on, SLM forecasts that our customers will increasingly need to procure more locally. In response, the company will continue enhancing its advanced technological development and high-quality global distribution to serve the needs of customers and achieve higher customer satisfaction.
